Graduation	Photo & Video Content	to assist you in building your portfolio
	Certificate	
	6-month support	online

Overview

Pre-study program (30 days before the training)

Practice on the synthetic skin:

- Students will be invited to the training academy to receive their student bags and homework. If students are not from Christchurch, the kits will be sent by courier, and the homework will be sent online.
- During the preparation time, students will practice tattoo techniques on synthetic skin using tattoo machines. Their progress will be monitored by the Master.

The student manual will be sent online. By the start of the training at the academy, students must be familiar with the fundamentals.

Day 1

Explore:

- Sanitation.
- Skin Camouflage: scars, stretch marks, skin grafts, vitiligo, burns, radiation markers. Methods & Performance for Every Skin Type.
- Reconstructive tattoo: areola repigmentation, belly button and nail reconstruction, Syndactyly (webbed toes). Methods & Performance for Every Skin Type.
- Client considerations: skin theory, undertones, Fitzpatrick scale, color and method selection.
- **Master color theory:** Understand and identify colors, differentiate them, create desired shades, and work effectively with pigments.
- **Saline tattoo removal:** Learn how to lighten up or remove the tattoo.
- **Healing:** The healing process for different types of skin and age. Aftercare, touch-ups, and preparation.
- **Mapping:** Learn the rules and techniques for crafting personalized design.
- **Delve into procedural aspects:** Perfect body positioning and stretching
- **Technical skills:**
 - Practice on synthetic skin while exploring needle types, machine varieties, needle depth, blending methods, and identifying signs of improper technique.
 - Most importantly, learn the correct way to hold and operate the tattoo machine.
 - Practice all existing cosmetic tattooing techniques to find the perfect fit for your hand and temperament. I have several tattoo machines ideal for medical tattooing, and we'll explore them to find the one that feels best for you.

Day 2

- **Technique:** Practice on synthetic skin. Pressure & Patterns
- **Prepping for the Procedure**
- **Client Consultation** (Pre-procedure & Aftercare Instructions)
- **Model:** Practice on the invited model under Dasha's supervision. Feel free to bring your own model, or let us find one for you.

Day 3

There are two options: You can observe a two-hour session where Dasha performs a cosmetic tattoo on a client. This will give you a firsthand look at the procedure. Or you can choose to do another model under Dasha's supervision. Optionally, Dasha can perform a cosmetic tattoo on you. Following the session, there will be a one-hour consultation to answer all your questions.

Day 4 & 5

Day 4&5 of the training, conducted four to six weeks after your initial training, includes a one-hour consultation and a two-hour touch-up session.

- **Follow-up session for your model:** This session, taking place in either my studio or yours, allows us to assess your model's healed results (as we prioritize healed results over fresh tattoos). If Day 4&5 are held in your studio, you'll receive guidance on arranging your workspace and recommendations on your positioning near the treatment table.
- **Recommendations:** Based on this assessment, I can provide personalized recommendations for further refinement.
- **Consultation:** Have your questions ready for me. I'm happy to answer anything.
- **Graduation:** The student will receive the certificate of course completion.

What`s included

<i>Item Description</i>	<i>Amount</i>
Student Manual	I personalize each course to the individual needs of each student, knowing your previous experience will help me prepare a tailored student manual and class schedule for you.
Starter kit	
Certificate
